AccuDrawer

The AccuDrawer is an ideal solution for streamlining processes to monitor, manage, and maintain tools in environments where any lost or misplaced tool is a safety risk. Combining secure storage with passive RFID technology and CribMaster's Inventory Management System software, the AccuDrawer provides positive tool control.

Any time employees access the system, they are required to identify themselves. The system then records in real time when an item is taken, who takes it, and when it is returned.

- Control access to tools at point of use, including assembly points and flight lines.
- Determine missing items directly from the touchscreen interface.
- Monitor calibration schedules and inspection processes.
- Receive automatic alert notifications when tools are not returned in a proper time frame.

Features and Benefits

- Monitor certification, tool inspection, and gauge calibration schedules.
- Reduce safety risks.
- Maintain FOD and FME compliance regulations.
- Improve operational efficiencies.
- Increase visibility of tools.
- Daily check-out reports.
- Suggested Product Types.

The AccuDrawer is an ideal solution for managing durable inventory such as:

- Hand tools.
- Calibrated tools and gauges.
- Kits.
- Specialty Tools.

Configurations

The AccuDrawer is available in four sizes to suit your unique application. The cabinet includes a 4-color light bar indicating status such as network connection, items in items out or items in repair.
